Angular Task

The task for angular is to test working with RESTful API's. You can make a search box showing the results and a page that has book details. You can use the basic html template that we provide on attachment.

The task requirements are as follows

- Search functionality using the provided API in document
- Result of the API in neat UI
- UI should be clean & good looking

on Angular for Open Library RESTful API.

=====================

You will make two queries to the openlibrary rest api. ([Open Library RESTful API | Open Library](#))

=====================

[https://openlibrary.org/dev/docs/api/search]

1. Search for a title = HTTP GET – openlibrary.org/search.json?q={query text}

You can replace the {query text} with the search query text.
For ex. openlibrary.org/search.json?q=the+lord+of+the+rings

=====================

[https://openlibrary.org/dev/docs/restful_api]

2. Get Book Details = HTTP GET – openlibrary.org/books/{Book Id}.json

You can replace the {Book Id} with the books identifier.
For ex. http://openlibrary.org/books/OL17910702M.json

You can just show basic details. We will assess the code you wrote.
